ROLLER GRILLES

For over 20 years, Jansen Security Shutters has been manufacturing and installing roller shutters for the closure of your parking garage, parking area and the entrance to your business park. The open structure allows sufficient fresh air to pass through, which is often a requirement in combination with the smoke extraction system. Depending on the volume of use - how frequently is the parking barrier used? - you can choose from various types of roll-up security grilles.

Advantages roller grilles:

- Can withstand volumes of use of parking spaces of up to 200 spaces.
- Are equipped with the most modern and reliable electronics for operation and detection of vehicles and other objects.
- Are tailored to the usage requirements and constructional possibilities.
- Can be used up to very large areas, providing a tailor-made solution for almost all situations.

Are you curious as to whether a roller grill meets the requirements of the security plan? Please, feel free to contact us.

STEEL ROLLER SHUTTERS

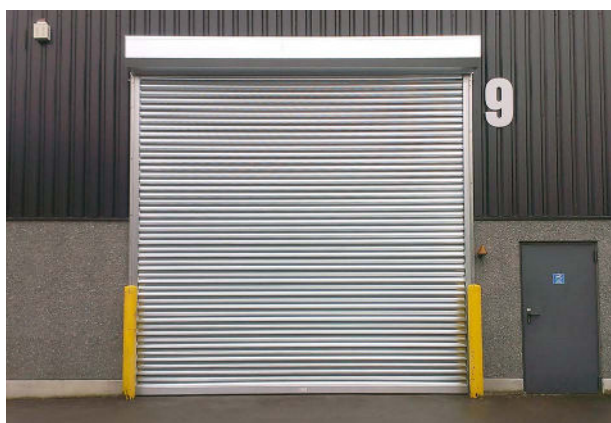

To secure your entrance or car park, a roller shutter with a solid steel slats is ideal, as everything behind the shutter is hidden from the view. This eliminates any reason for a possible break-in. Depending on the width and height of the opening, Jansen Security Shutters recommends the suitable slat for your application.

Advantages steel roller shutters:

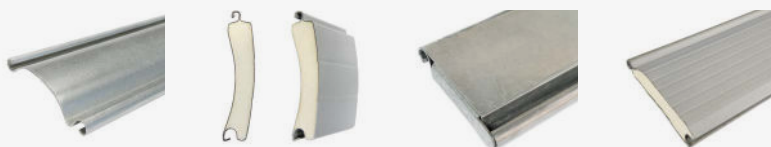

- Can withstand volumes of use in parking areas of up to 25 spaces.
- Are equipped with the most modern and reliable electronics for operation and detection of vehicles and other objects.
- Are tailored to the usage requirements and structural possibilities.
- Can be used up to very large areas, allowing us to provide almost any situation with a suitable roller shutter.
- Are also available in combinations with closed and open slats.
- Available in all RAL colours.

Are you considering securing your parking area? Feel free to inquire about the possibilities steel roller shutters can offer you.

PUNCHED ROLLER SHUTTERS

A robust roller shutter with a playful look and yet sufficient aeration can be found in a steel roller shutter with punched holes. Spread across the slats there are holes that provide light, air and visibility. Depending on the aeration requirements for the parking garage, it may be sufficient to add a number of punched slats to a solid steel roller shutter. For example, at eye level, about five slats can provide visibility into the parking garage while the rest of the slats are manufactured without holes.

Advantages punched roller shutters:

- A roller shutter with punched slats gives up to 50% transparency.
- Six punched holes per 1 metre of slat.
- The size of a punched hole is 80x40mm.
- Punched slats can be combined with solid steel or perforated slats.
- Punched roller shutters are available in all RAL colours.

Would you like to know more about punched roller shutters or a combination? Then feel free to contact us for more information.

Punched profiles

PERFORATED SHUTTERS

Steel slats for a roller shutter can be provided with small holes. This is called micro perforation. Curtains for roller shutters that have applied this technique are often used in shops because it provides a nice spectacle when the lights are on. This option is also very applicable for car parks. It is an elegant solution where aeration is possible through the perforation holes. Jansen Security Shutters makes these perforated slats in-house and can therefore apply specific perforation patterns.

Advantages perforated roller shutters:

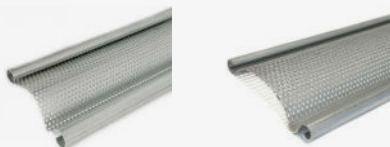

- Up to 50% transparency.
- Beautiful spectacle with light.
- Aeration through micro-perforation.
- Perforation patterns possible.
- Available in any RAL colour.

For more information about perforated roller shutters for your car park, please contact us or visit our website.

Perforated profiles

SPEEDGATES

When a car park needs a barrier that secures the entrance to your car park from unwanted visitors, a speedgate is an aesthetic solution. A speedgate is very suitable for situations with a high volume of use. The adjustable speed for opening and closing allows the opening to be used quickly and efficiently. In addition, the open structure ensures sufficient air supply, which is often a requirement in combination with the smoke extraction system.

Advantages speedgates:

- Are suitable for a high volume of use and for situations where opening and closing must be applied quickly and efficiently.
- Are equipped with the most modern and reliable electronics for operation and detection of vehicles and other objects.
- Are tailored to the user requirements and structural possibilities.
- Can be used up to very large areas and can close almost any parking situation with opening and closing technology.
- Offer a wide range of fence options, allowing the aesthetic appearance of the building to meet architectural requirements. Some options include: bars, perforated mesh, closed panels, etc.
- Are standard powder coated in the desired RAL colour.

When a parking facility needs to be locked 24/7 but still opens and closes at the desired times, we recommend an aesthetic speedgate. Feel free to inquire about the possibilities of this product.

SCISSOR GATES

Especially for carports, Jansen Security Shutters offers a gate with a special appearance. To keep unwanted visitors at bay, we produce and install aesthetic scissor gates (folding gates) with a grilled pattern for every type of carport or garage box. A scissor gate can consist of one or two gate parts. The single version is mounted on one side of the carport and will close on the other side. A double scissor gate consists of two grilles that lock in the middle.

Advantages scissor gates:

- Are specially designed for single parking spaces such as carports and individual garage boxes.
- Are equipped with manual operation and solid lock.
- Are tailored to the usage requirements and structural possibilities.
- Give a transparent closure and are not sensitive to malfunctions because they do not contain any electronic parts.
- Are flexible in design (centre lock, edge lock or a combination) and have a bottom rail (T-rail) that is suitable for cars to drive over.

Would you like to secure your parking space with an aesthetic scissor gate? Then feel free to find out what we can do for you.
